Right lateral

Signed contrast | 751 - 4849

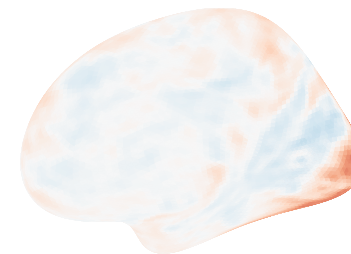

Left lateral

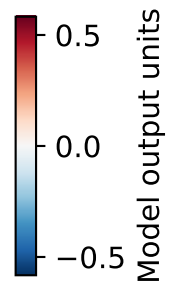

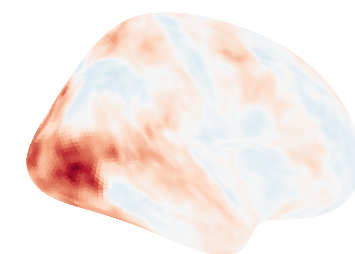

Left medial

Right medial

Right lateral

fsaverage5: 20,484 vertices. Both image maps share a scale; the signed contrast has its own scale.
Native hemodynamic compensation retained. Model predictions, not measured fMRI or complexity scores.

Directional cortical contrasts | t=0

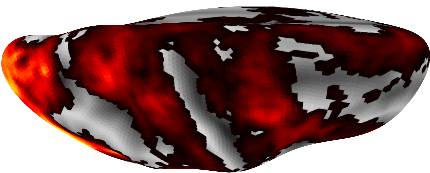

Dorsal views | Positive and negative differences displayed separately

Raw contrast
751 > 4849

Left dorsal

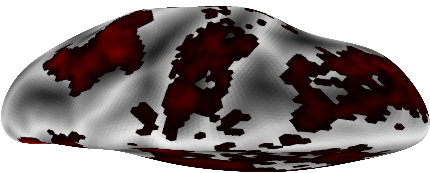

Right dorsal

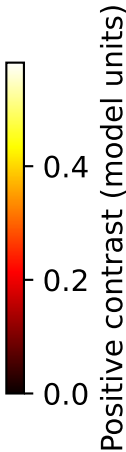

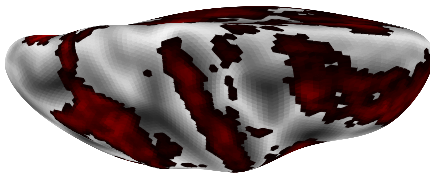

Raw contrast
4849 > 751

Left dorsal

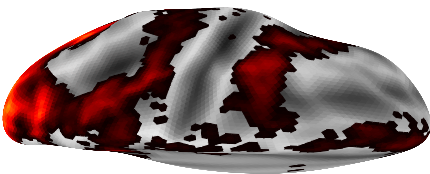

Right dorsal

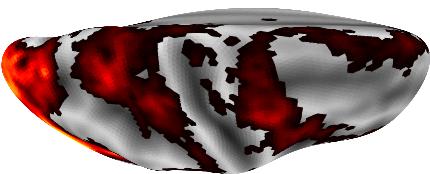

Whole-brain mean removed
751 > 4849

Left dorsal

Right dorsal

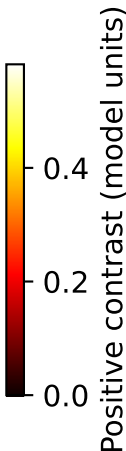

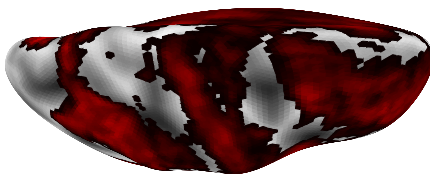

Whole-brain mean removed
4849 > 751

Left dorsal

Right dorsal

One shared, data-derived scale across both directions and both rows; zero/opposite-sign vertices are uncolored.
Demeaning subtracts the spatial mean of the signed contrast. One image pair: no group inference or significance threshold.
